Neoprene® Prosthetic Below Knee Suspension Sleeve
CARE & PERFORMANCE GUIDE

YOUR U.S. ORTHOTICS SLEEVE.

Your sleeve is made of 100% Neoprene rubber with an excellent capacity to withstand compression. This means it will maintain thickness under greater pressure. It’s also more likely to rebound to its original thickness after repeated or severe compression.

All of our sleeve exteriors are covered with nylon fabric. The interior surface can be either textured rubber or nylon fabric. Covering neoprene with nylon fabric provides strength with resistance to tearing and abrasion – along with the ability to slide over the body easier than a rubber surface alone. Nylon coverings also offer different colors and textured rubber neoprene is naturally adherent and aids in gripping.

YOU NEED TO KNOW.
Small tears in the nylon sleeve will not affect the sleeve's performance. Also, cleaning and changing your sleeve regularly helps obtain maximum life from your sleeve.

CARE INSTRUCTIONS

• Hand wash your sleeve in the sink with mild soapy water. (If you must use a machine, use the delicate cycle.) Then, air dry, do not put your sleeve in the dryer.
• Do not use bleach or solvents.
• Make sure your sleeve is completely dry before applying it to your prosthesis.
• Store flat to avoid permanent creases in the neoprene.

WARNING
If skin irritation occurs, discontinue use and contact your prosthetist immediately.

WARRANTY
U.S. Orthotics sleeves are warranted against defects in workmanship or materials for 30 days from the purchase date.

U.S. ORTHOTICS SUSPENSIONS SLEEVE PRODUCTS

STANDARD CONTOURED SLEEVE SERIES – Additional bubble of material in the front to extend life of the sleeve. 4mm thick
